

To whom it may concern:

Our on-going collaboration with H-ON Consulting over the course of the past 4 years was aimed to assess and evaluate machine safety alignments regarding regulatory compliance within the European laws; Directive 2006/42/EC “CE marking” and 2009/104/EC “Minimum safety and health requirements”

The work was beyond our expectations in terms of cost savings and the speed of delivery with which we accomplished our goals. H-ON has an unconventional way of thinking that expert level of that helped our company to solve practical safety issues in the most efficient ways..

What we appreciated most about working with H-ON was their ability to cut through the predictable politics of a project, keep everyone happy, and deliver the expected results.

The high level of technical competence has been unmatched.
