

Dear Sirs,

It is with great pleasure that I have the opportunity to recommend H-ON Consulting for the implementation of Cyber Security for Industrial Automation and Control Systems (IACS).

H-ON Consulting has carried out an assessment service based on ISA99/IEC62443 (**Cybersecurity Risk Assessment**) for our Unit Control Systems for Oil & Gas and Energy applications. They provided an audit at our headquarters in Italy, defining a specific vulnerability assessment for each threat and attack pathway.

The biggest benefit our company received working with H-ON was a combination of on-going flexibility and most of all speed of delivery. Their expertise was tremendously valuable and I would highly recommend them to other companies as a team that has extensive experience and understanding of international markets.
